

Camcleaner 400 (CC400) Air Cleaner is a versatile purification unit suitable for spaces <math>< 13,000 \text{ ft}^3</math>. It can be configured with various combinations of particulate and molecular filters required for applications such as dust, smoke, decontamination gas, odor and corrosion. Multiple units can be set up in a space to create improved air movement and more effective contaminant removal.

Construction Details

Body Material: galvanized or 316 stainless steel

Power: 120V/60Hz or 240V/60Hz

Duct Connection: 10" diameter

Airflow: Maximum 400 cfm

6-stage controller card

Modbus protocol connection

Air Image Sensor

Installation: In-line with ducting or standalone wall- or ceiling-mounted

Fan: Electrically Commutated (EC)

Sound Level @ 5' perimeter: 61.3 DB

Pressure Sensing Taps: placed up and downstream of particulate filters

- Versatile air cleaner to treat spaces up to 13,000 ft³
- Suitable for a variety of applications requiring various combinations of particulate and/or molecular filters
- Available for concealed in-line ducting installation or as a standalone wall- or ceiling-mounted recirculation unit

Versatility

CC400 can accommodate a variety of filter combinations tailored to the specific application. Particulate filters supplied by Camfil are tested under ASHRAE 52.2 and Appendix J. Molecular filters are tested according to ISO 10121-2:2014.

Lifetime

The achieved service life in any application will be influenced by several factors, including airflow, type and concentration of the contaminant, temperature, humidity and filter selection. To ensure the ongoing effectiveness of the molecular filter installation, a series of life analysis tests should be conducted on media samples to determine the remaining capacity.
